Abstracts

Organic and inorganic pigments for plastics are widely used for coloring and decorating plastic products. These pigments provide plastics with vibrant colors and aesthetic appearances, while also offering excellent properties such as light stability, heat resistance, and weatherability. Organic pigments for plastics usually feature bright hues and good dispersibility, making them suitable for processing techniques like injection molding and extrusion. On the other hand, inorganic pigments offer more stable performance, typically providing better heat resistance, UV protection, and corrosion resistance. Common organic pigments for plastics include phthalocyanine green, phthalocyanine blue, and azo pigments, while inorganic pigments include titanium dioxide, iron oxide red, and chrome yellow. Depending on the specific application requirements, either organic or inorganic pigments can be selected to meet the quality standards for plastic products.

The global Organic and Inorganic Pigments for Plastics market size was estimated at USD 5072.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
