Report Overview:

Phase change materials (PCMs) are substances with a high enthalpy of fusion, also known as latent heat, meaning they can store large quantities of heat energy as they change phase. When melting, they absorb heat and maintain the temperature of the environment at a certain value until completely molten. When the temperature of the environment falls below the crystallisation temperature, the PCM will start to solidify, releasing large quantities of heat and maintaining the temperature until completely solid.

The Global Organic Phase Change Materials (PCM) Market Size was estimated at USD 286.99 million in 2023 and is projected to reach USD 375.89 million by 2029, exhibiting a CAGR of 4.60% during the forecast period.
