Abstracts

Organo silicon flame retardant synergists are a class of flame retardant materials based on organosilicon compounds. These flame retardants improve the fire resistance of materials by reducing the flammability of materials, delaying the spread of flames and reducing the release of harmful gases. Organosilicon synergistic flame retardants usually have excellent thermal stability, low volatility and good compatibility, and can work synergistically with other flame retardants to enhance the overall flame retardant effect. They also perform well in environmental protection and safety, meeting increasingly stringent environmental regulations and market demands.

The global Organic Silicone Flame Retardant Synergist market size was estimated at USD 316.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.70% during the forecast period.
