Report Overview:

Soybean meal is used in food and animal feeds, principally as a protein supplement, but also as a source of metabolizable energy. Some, but not all, soybean meal is produced from the residue left after oil extraction. Removal of the oil, which is used mostly in food, but also for industrial oils, soaps and biodiesel, involves crushing and either pressing or solvent extraction. Some, but not all, soybean meal contains ground soybean hulls. Soybean meal is heat-treated during production, to denature the trypsin inhibitors of soybeans, which would otherwise interfere with protein digestion.

The Global Organic Soymeal Market Size was estimated at USD 404.59 million in 2023 and is projected to reach USD 724.62 million by 2029, exhibiting a CAGR of 10.20% during the forecast period.
