## Abstracts

Organically bound trace minerals refer to trace minerals that are chemically bonded to organic molecules, often in the form of proteins or amino acids, making them more bioavailable and easier for the body to absorb and utilize. Unlike inorganic minerals, which may be less efficiently absorbed, organically bound minerals are typically found in animal or plant sources and are integral to numerous physiological functions, including enzyme activity, immune response, and bone health. These minerals, such as zinc, copper, and manganese, are often used in animal feed, human nutrition supplements, and agricultural applications to improve mineral uptake and promote overall health.

The global Organically Bound Trace Minerals market size was estimated at USD 1405.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
