## Abstracts

Siloxane, a functional group of organosilicon chemistry combines higher efficiency silicone oils with compatible polymeric resin. Organo-modified siloxane is used as a performance additive for improving bulk and surface properties. The petrochemical industry, or petrochemicals for short, generally refers to the chemical industry that uses oil and natural gas as its raw materials. The sudden global outbreak of New Crown Pneumonia in the early 2020's delivered a huge blow to the petrochemical industry, with the International Energy Agency predicting at the beginning of the 2020's that global demand for oil in 2020 would fall by 8.1 million barrels per day (bpd). This is the first annual decline in global oil consumption since 2009 and the financial crisis. Global refined oil product consumption fell by nearly 30% in the first quarter of 2020, and global oil supply in the second quarter showed the largest single-quarter supply surplus ever. As a result, the market size of petrochemicals in 2020 declined to a certain extent, with the global petrochemicals market size of \$422 billion in 2020, a year-on-year decline of 4.3%. In the second half of the year, due to the fall in crude oil prices and shrinking downstream demand, the overall profit of the petrochemicals industry has been significantly narrowed, and a number of enterprises have also incurred losses. The stability of the global trade supply chain has been tested to a certain extent after the New Crown Pneumonia epidemic, and many countries have begun to shift important resources, such as petrochemicals, to local areas after realizing the weak ability of the globalized trade supply chain to resist huge risks.

The global Organo-Modified Siloxanes market size was estimated at USD 408.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
