## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Organophosphorus Compounds competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Organophosphorus compounds refer to compounds that contain carbon-phosphorus (C-P) bonds in their molecular structures or that are connected to organic groups by other atoms (such as oxygen, nitrogen, etc.). They are of various types and properties and are an important branch of organic chemistry. These compounds can be synthesized through a variety of chemical reactions, and because phosphorus atoms have a variety of valence states (such as +3, +5, etc.) and rich coordination capabilities, organophosphorus compounds exhibit unique chemical and physical properties and are widely used in many fields.

The global Organophosphorus Compounds market size was estimated at USD 1547.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
