Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Organosilicate Glass competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Organosilicate Glass (OSG) is a class of dielectric materials composed of silicon, oxygen, carbon, and hydrogen, typically used in semiconductor manufacturing as low-k dielectrics. These materials are hybrids of organic and inorganic components where silicon atoms are bonded to both oxygen and organic functional groups such as methyl (-CH₃). OSGs are primarily applied as interlayer dielectrics in integrated circuits due to their low dielectric constant (k-value), which helps reduce parasitic capacitance, power consumption, and signal delay in high-speed electronic devices. They are usually deposited via chemical vapor deposition (CVD) or spin-on methods and often undergo a curing process to enhance mechanical and thermal stability. Organosilicate Glass (OSG) is a low-k dielectric material commonly used in semiconductor interconnects, characterized by a dielectric constant typically ranging from 2.0 to 3.3, significantly lower than that of traditional SiO₂. It features a hybrid composition of silicon, oxygen, carbon, and hydrogen, often incorporating methyl or other alkyl groups to reduce polarizability. OSG films exhibit refractive indices between 1.38 and 1.45, densities around 1.2 to 1.5 g/cm³, and thermal stability up to approximately 400°C. They are usually deposited via plasma-enhanced chemical vapor deposition (PECVD) or spin-coating and then cured to enhance mechanical integrity. The material often includes controlled porosity (0-30%) to further lower the dielectric constant, though this can impact water absorption and mechanical strength, with Young's modulus typically in the 2-10 GPa range and electrical breakdown voltages exceeding 5 MV/cm.

The global Organosilicate Glass market size was estimated at USD 596.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.20% during the forecast period.
