Abstracts

In industrial paper-making processes, organosolv is a pulping technique that uses an organic solvent to solubilise lignin and hemicellulose. Organosolv has several advantages when compared to other popular methods such as kraft or sulfite pulping. In particular, the ability to obtain relatively high quality lignin adds value to a process stream otherwise considered as waste. Organosolv solvents are easily recovered by distillation, leading to less water pollution and elimination of the odour usually associated with kraft pulping. Organosolv Lignin is a lignin preparation obtained by dissolving and separating in the process of organic solvent pulping. Globally, the main producers of organosolv lignin include well-known companies such as Borregaard, Fortum, and Domtar Corporation. These companies have occupied a favorable position in the market with their deep technical accumulation and brand influence. Market and development trends Market demand: With the improvement of environmental awareness and the popularization of the concept of sustainable development, the market demand for organosolv lignin as a green chemical and low-carbon and environmentally friendly polymer material will continue to grow. Technological innovation: The emergence of new technologies will promote the continuous improvement of the extraction, processing and utilization efficiency of organosolv lignin, providing strong support for its market expansion. Policy support: The support and promotion of government policies will also provide strong guarantees for the sustainable development of the organosolv lignin market. For example, the implementation of environmental protection policies will promote the green transformation and upgrading of the lignin industry and promote the widespread application of green chemicals such as organosolv lignin.

The global Organosolv Lignin market size was estimated at USD 143.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
