## Abstracts

The Orbit Plug Valve is a type of valve that utilizes a rotating plug for opening and closing operations, designed to ensure that the valve plug and seat are disengaged during the opening process, thus achieving zero friction and preventing wear on the sealing surface for extended service life. With a flexible plug rotation, it reliably seals the inlet, outlet, and the intermediate flange connections, employing soft sealing materials and a sealing ring around the plug to achieve high seal integrity. The unique design of the dovetail groove protects and secures the sealing ring, ensuring zero leakage during closure. The Orbit Plug Valve is versatile in handling a wide range of media and is not restricted by installation orientation, operating with minimal vibration and noise, showcasing its necessity and superiority in fluid control applications.

The global Orbit Plug Valve market size was estimated at USD 581.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
