Abstracts

Orodispersible film (ODF) is a new oral pharmaceutical form, whose characteristics are able to improve the treatment compliance of certain groups of subjects whose needs are not met by capsules and tablets. They take the form of small, thin, flexible sheets, similar to postage stamps that, when placed inside the mouth, dissolve rapidly in contact with saliva. The dissolution time is usually a few dozen seconds and in any case no more than one minute. The weight of a single film is usually a few hundred mg, meaning that very little saliva is required for dissolution. According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment. Orodispersible film, also known as orally disintegrating film, is an innovative drug delivery form designed to offer a more convenient and comfortable medication experience. This film rapidly disperses and dissolves in the oral cavity without the need for additional water or liquid, allowing the active pharmaceutical ingredients to be quickly absorbed into the body. Orodispersible films are characterized by pleasant taste, portability, and ease of administration, making them suitable for children, the elderly, and patients with swallowing difficulties. They showcase unique advantages in the field of drug delivery, providing patients with a friendlier and more effective way of taking medication.

The global Orodispersible Film market size was estimated at USD 93.9 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
