Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on ORP (Oxidation-Reduction Potential) Balls competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. ORP (Oxidation-Reduction Potential) balls are specially engineered ceramic balls used in water treatment systems to alter the oxidation-reduction potential of water. These balls typically contain minerals and metals such as tourmaline, magnesium, and sometimes silver or platinum, which interact with water to release negative ions and electrons. This process reduces the ORP value of the water, making it more antioxidative. Lower ORP water is often considered beneficial for health, as it can help neutralize free radicals in the body. ORP balls are commonly used in alkaline water systems, shower filters, and health-focused water products.

The global ORP (Oxidation-Reduction Potential) Balls market size was estimated at USD 306.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
