Abstracts

Ortho biological products represent a specialized category within the broader medical device and biotechnology sectors, encompassing biological materials derived from human or animal sources?such as bone grafts, growth factors, platelet-rich plasma (PRP) preparations, and cellular matrices?that are used to support and enhance the natural healing processes in orthopedic surgeries and musculoskeletal treatments. These products are distinct from traditional orthopedic hardware like implants or prosthetics, as they focus on biologics that integrate with the patient's own tissues to promote regeneration, repair, and restoration of function in bones, joints, tendons, and ligaments. The development and application of ortho biologics are driven by advances in regenerative medicine, tissue engineering, and a growing emphasis on minimally invasive procedures that reduce recovery times and improve long-term outcomes.

The global Ortho Biological Products market size was estimated at USD 4726.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
