Report Overview

The ortho projector is a specialized medical imaging device used primarily in orthodontics and maxillofacial surgery to project and analyze dental or skeletal structures with high precision. It enables practitioners to visualize and measure anatomical features, aiding in diagnosis, treatment planning, and surgical guidance. Unlike conventional projectors, ortho projectors are designed to work with X-ray films, digital scans, or 3D models, often integrating with CAD/CAM systems for enhanced accuracy. They play a critical role in procedures like cephalometric analysis, where precise measurements of jaw and tooth alignment are essential. The device is commonly used in dental clinics, hospitals, and orthodontic labs, with demand driven by advancements in digital dentistry, increasing adoption of minimally invasive techniques, and the growing prevalence of malocclusion and other dental disorders. Key market players focus on improving resolution, portability, and software integration to meet the evolving needs of specialists.
