Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Orthodontic Bands and Buccal Tube competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Orthodontic bands are metal rings, typically made of stainless steel, that are cemented around molars or premolars to serve as anchorage units in fixed orthodontic appliances. They provide a strong base for attaching brackets and accessories. Buccal tubes are small metal components welded onto the buccal side of bands (or directly bonded to the tooth surface) to accommodate archwires, headgear, elastics, or other auxiliaries. Used together, bands and buccal tubes form essential parts of anchorage and force delivery systems in orthodontic treatment, particularly on the first molars.
