Abstracts

Orthodontic buccal tubes are specialized dental appliances, typically made of medical-grade stainless steel or ceramic materials, that are permanently bonded to the molars during orthodontic treatment. These small, precision-engineered components serve as anchor points on the buccal (cheek-facing) side of the teeth, functioning to secure archwires and auxiliary appliances such as headgear, lip bumpers, or transpalatal arches. By providing stable attachment and force distribution, buccal tubes facilitate controlled tooth movement, alignment, and correction of malocclusions, playing a critical role in fixed appliance systems used in both conventional and self-ligating bracket technologies.

The global Orthodontic Buccal Tube market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
