## Abstracts

An orthogonal milling head is a machine tool attachment primarily used to alter the cutting direction of the tool, enabling it to perform cutting operations in a direction perpendicular (orthogonal) to the axis of the machine tool's spindle. It is typically mounted on the spindle end of milling machines, machining centers, and other machine tools. The conversion of the tool's cutting direction is achieved through internal transmission mechanisms (such as gear transmissions or worm gear transmissions). It expands the machining capabilities of the machine tool, allowing it to complete milling operations at various angles, including sides and planes.

**Work Advantages and Classification Methods** Orthogonal milling heads, as crucial machine tool accessories, are extensively applied in various mechanical processing situations. Their special structure enables them to meet the processing requirements of complex shapes. Precision bearings and oil lubrication systems can reduce friction, thereby featuring high processing accuracy and long service life. Classified by indexing values, they can be categorized into 2.5°/1°/0.001°/0.005°, etc.; by rotational speeds, they can be divided into 4000/5000/6000/7000/8000 rpm, etc.; by tool changing methods, they can be categorized into manual tool changing and automatic tool changing; and by angle adjustment capabilities, they can be divided into universal adjustment and fixed angle.

**Major Market Participants** The primary manufacturers of orthogonal milling heads are well-known milling machine and milling machine accessory manufacturers, and the market competition is relatively intense. Globally, companies such as Lagun and Nicol's Correa from Spain, as well as CYTEC and VOLMATEC from Germany, possess advanced technological strength. Domestic enterprises, including UNO CNC and Automation Co., Ltd. and Starfish Ruhr Heavy Machinery Technology (Dalian) Co., Ltd. are gradually capturing a portion of the market share.

**Future Market Trends** With the continuous advancement of digital technologies such as artificial intelligence, the intelligent manufacturing industry is thriving. As an essential component of milling

machines, orthogonal milling heads will develop towards intelligence and composite functionality in the future, achieving more complex processing techniques, higher processing efficiency, and more intelligent parameter monitoring and adjustment capabilities. Furthermore, accuracy and stability will gradually improve to meet the increasingly demanding market requirements, leading to broader application and promotion in more fields.

The global Orthogonal Milling Heads market size was estimated at USD 676.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
