Abstracts

Orthopedics is that branch of medicine which treats the damages of the skeletal system, ligaments, and muscles. It comprises prosthetics (devices that substitute for a limb or joint) and orthotics (lower back support and knee braces). Since the first use of artificial legs, the orthopedics market has come a long way. The biggest leap in technology occurred in the late 1980s with the advent of composite materials in the production of orthopedic devices. Orthopedic devices made from composite materials deliver excellent features such as lightweight, durability, and corrosion resistance. Owing to these advantages, composite materials started gaining traction in sporting events such as the Paralympic and Olympic. However, the high cost of these materials is still acting as a bottleneck towards the greater adoption among the user base. According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.

The global Orthopedic Composite market size was estimated at USD 1061.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
