Abstracts

Orthopedic heating pads are a type of medical rehabilitation device that combines heat therapy with physical support functions. They are mainly used to relieve muscle pain, joint stiffness, or postoperative rehabilitation. They have built-in flexible heating elements (such as carbon fiber or alloy wire) that promote local blood circulation through a temperature control system (usually adjustable from 40°C to 60°C). They also fit the curves of the human body to provide stable support and are suitable for the cervical spine, lumbar spine, knee joints, and other parts. Most products use breathable and antibacterial fabrics, and some models support far-infrared therapy or vibration massage functions. They are commonly used in home therapy, sports injuries, and auxiliary treatment of chronic diseases (such as arthritis).

The global Orthopedic Heating Pad market size was estimated at USD 1568.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
