Periodic acid is the highest oxoacid of iodine, in which the iodine exists in oxidation state +7. It can exist in two forms: orthoperiodic acid, with the chemical formula H_5IO_6 , and metaperiodic acid, which has the formula HIO_4 . The world's main iodine producers are based in Chile, Japan, and the United States. Iodine is also produced in Russia, Turkmenistan, Azerbaijan, Indonesia, and China. Iodine is produced in Chile using a unique mineral known as caliche ore, whereas in Japan, the United States, Russia, Turkmenistan, Azerbaijan, and Indonesia, producers extract iodine from underground brines that are mainly obtained together with the extraction of natural gas and petroleum. In China, iodine is extracted from seaweed. Periodic acid is a moderately strong oxidizing agent and the highest oxo acid of iodine (in which iodine exists in the +7 oxidation state). Like all periodates, it can exist in two forms: orthoperiodic acid, with the chemical formula H_5IO_6 and metaperiodic acid with the formula HIO_4 . In diluted solution, periodic acid exists in the form of H^+ and IO_4^- ions. In higher concentrations, orthoperiodic acid, H_5IO_6 , is formed. The latter can be obtained in crystalline form. Orthoperiodic acid can be dehydrated to metaperiodic acid, HIO_4 . Further heating leads to the formation of diiodine pentoxide (I_2O_5) and oxygen. Periodic acid has a wide range of applications in many fields, such as printing chemicals, electronic chemicals, process chemicals, life science reagents, etc. The demand for periodic acid in these fields is growing, which has driven the development of the market.

Market Trends and Prospects

Technological Innovation: With the continuous advancement of chemical synthesis technology, the production process of periodic acid has been continuously optimized, the cost has gradually decreased, and its market competitiveness has been improved. In the future, technological innovation will continue to promote the development of the periodic acid market.

Application Expansion: The application of periodic acid in various fields continues to deepen and expand, and the discovery of new application scenarios will further broaden its market demand. In the future, with the

development of more new application scenarios and the expansion of application fields, the periodic acid market will usher in more development opportunities. Improved Environmental Awareness: With the enhancement of global environmental awareness, the demand for environmentally friendly chemicals is increasing. As an environmentally friendly chemical, periodic acid will receive more attention. In the future, the improvement of environmental awareness will promote the further development of the periodic acid market.

The global Orthoperiodic Acid and Metaperiodic Acid market size was estimated at USD 60.1 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
