Report Overview:

The term vanadate laser is usually used for lasers based on neodymium-doped vanadate crystals. In particular, these include yttrium vanadate (Nd:YVO₄), gadolinium vanadate (Nd:GdVO₄), and lutetium vanadate (Nd:LuVO₄). These vanadates are also called orthovanadates. Such materials have been known for a long time, but became popular only many years later, because for a long period it was difficult to grow them with high optical quality in sufficiently large sizes. Apart from progress in crystal growth, the advent of diode pumping increased the interest in vanadates also because much smaller crystals could be used, while lamp-pumped lasers usually require rather long laser rods.

The Global Orthovanadate Crystal Market Size was estimated at USD 766.59 million in 2023 and is projected to reach USD 1093.59 million by 2029, exhibiting a CAGR of 6.10% during the forecast period.
