Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Osteoporosis Didactic Model competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Osteoporosis Didactic Model production reached approximately 4,034,583 units, with an average global market price of around US\$ 120 per unit. An Osteoporosis Didactic Model is a specialized anatomical teaching and demonstration tool designed to visually and physically represent the structural changes that occur in human bone affected by osteoporosis, particularly the progressive loss of bone mass, deterioration of trabecular architecture, cortical thinning, and increased fragility. These models enable students, clinicians, and patients to understand the anatomical and biomechanical differences between healthy bone and osteoporotic bone in a highly tangible, simplified, and magnified form. Gross Profit Margin Level Osteoporosis teaching models belong to the category of educational/medical consumables, characterized by high gross profit margins, low material costs, and a focus on R&D, design, and brand premium. Their costs are primarily concentrated in mold development, styling design, detailed painting, assembly, and international marketing channels, while raw material costs (plastic/resin + packaging) account for a relatively low percentage. Compared to other general anatomical models and medical education products, osteoporosis models are typically sold as complete sets (model + chart + display stand), with the unit price significantly higher than the material cost. Public industry case studies and company interviews show that high-end European and American brands (such as 3B Scientific, SOMSO, and R?diger) typically achieve a gross profit margin of 45%?60% in hospital and medical school channels; considering channel discounts and distribution levels, the manufacturing gross profit margin generally remains between 35% and 45%. OEM/ODM manufacturers in China and India

have relatively lower gross profit margins in bulk export orders, roughly between 20% and 30%, using economies of scale and shared molds across multiple product categories to reduce costs. In overall calculations, the average gross profit margin of the global osteoporosis teaching model industry is roughly between 35% and 50%. Brand manufacturers dominate the high-end, high-margin segment, while OEM manufacturers occupy the mid-to-low-end market and cross-border e-commerce channels through low costs and large volumes.

Industry Drivers The core driving force behind osteoporosis teaching models stems from the rapidly increasing global burden of osteoporosis and the transformation of medical education and patient education models. Currently, approximately 200-500 million people worldwide are affected by osteoporosis or low bone mass, with tens of millions of fragility fractures occurring annually. With the increasing aging population, longer life expectancy, and lifestyle factors (sedentary lifestyle, insufficient calcium/vitamin D intake, smoking, and alcohol consumption), osteoporosis has been identified as a priority intervention area by public health systems in various countries. The International Osteoporosis Foundation and national osteoporosis associations continuously emphasize the importance of early screening, early diagnosis, and patient self-management, and intuitive and engaging teaching/educational tools are key to improving patient understanding and adherence. This directly drove the demand for osteoporosis teaching models from hospitals, clinics, and elderly care institutions, and prompted pharmaceutical companies and medical device manufacturers to adopt related models extensively in their marketing and patient education programs.

The global Osteoporosis Didactic Model market size was estimated at USD 484.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
