Abstracts

Osteosynthesis products are medical devices used in orthopedic surgery to stabilize and internally fixate bone fractures through the implantation of plates, screws, intramedullary nails, wires, pins, or external fixation systems, enabling proper bone alignment and healing while reducing patient immobilization time. The market for these products is driven by an aging global population, rising incidence of trauma and sports injuries, and advancements in material science such as bioresorbable and titanium alloys, though it faces challenges including stringent regulatory approvals, high product costs, and the risk of post-surgical complications. Geographically, North America and Europe dominate due to well-established healthcare infrastructure and higher adoption rates of advanced surgical techniques, while Asia-Pacific is emerging as a high-growth region fueled by increasing healthcare expenditure, medical tourism, and growing awareness of modern treatment options. Competition is intense among key players who focus on innovation in minimally invasive solutions, personalized implants via 3D printing, and expanding product portfolios through strategic mergers and acquisitions.
