### Report Overview

OTA stands for Over-the-Air Test System. It is a method for evaluating the performance and functionality of wireless devices such as smartphones, tablets, and IoT devices in real-world wireless environments. Traditional testing methods involve using cables to connect devices to test equipment, which may not accurately represent how a device will perform on a wireless network. In contrast, OTA test equipment can perform more realistic assessments by simulating real-world scenarios and conditions. OTA test equipment uses an anechoic or reverberant chamber to create a simulated wireless environment. The device under test (DUT) is placed in the test equipment and various tests are performed to measure parameters such as signal strength, call quality, data throughput, antenna performance and power consumption.

This report provides a deep insight into the global OTA Test Equipment market covering all its essential aspects.
