Report Overview

Out-of-phone Power Management Integrated Circuit is a Power Management Integrated Circuit deployed outside the mobile Phone. Such as mobile phone charger and mobile phone wireless charger. Out-Phone Power Management Integrated Circuit includes AC-DC power Integrated Circuit and wireless charging Integrated Circuit. Power Management Integrated Circuit (PMIC) is a single integrated circuit that performs various functions related to power management within electronic devices. It typically includes multiple power management features such as voltage regulation, power sequencing, battery charging, power conversion, and monitoring. The PMIC acts as a centralized control unit for managing power requirements and optimizing power usage. It takes input power from a power source, such as a battery or external power supply, and distributes the appropriate voltage levels to different components or subsystems of the electronic device. The key functions of a PMIC may vary depending on the specific application. In portable devices like smartphones, tablets, and wearables, the PMIC manages battery charging, power delivery to the display, processor, memory, cameras, and other subsystems. In larger systems like computers or data centers, the PMIC regulates power distribution, manages thermal considerations, and provides various protection mechanisms.
