Abstracts

An outboard sterndrive propeller is a propulsion device that combines the features of an outboard engine and a sterndrive propeller system, and is usually used in small vessels such as leisure boats and sports boats. The system transfers the power of the ship to the propeller through the outboard engine installed at the stern. The propeller unit can rotate underwater to provide propulsion and control. Compared with traditional outboard engine systems, outboard sterndrive propellers provide greater flexibility and precise control when the ship is traveling at low speed, reversing and turning through a design that combines the engine and the transmission system.

The global Outboard Sterndrive Propeller market size was estimated at USD 728.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
