Abstracts

Outdoor Laser Distance Sensors are devices designed to accurately measure distances in outdoor environments using laser technology. These sensors emit laser beams and measure the time it takes for the beams to reflect off an object and return. By calculating the round - trip time of the laser light, they can precisely determine the distance to the target object. They are equipped with features to withstand various outdoor conditions, such as harsh weather, sunlight interference, and dust. Outdoor Laser Distance Sensors are widely used in applications like surveying, construction, robotics, and autonomous vehicles operating in outdoor settings to provide reliable distance information for navigation, mapping, and obstacle detection.

The global Outdoor Laser Distance Sensors market size was estimated at USD 832.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
