Report Overview

A sauna is an enclosed, wood-paneled, temperature-controlled room used for outdoor heated therapy. Saunas are most often lined with cedar or spruce, can be heated by one of a few different fuel types, and have a wide range of customization and capacity options. Many electric or custom saunas today even feature app control to change the heater temperature. An outdoor sauna is a small room, separate from the rest of your home, where you can enjoy a steamy and relaxing sauna session. Many people think the term “outdoor sauna” refers exclusively to outdoor saunas built into caves or other natural features, but that’s not entirely accurate. Especially in these modern times, it’s most often used to mean a completely self-contained room that isn’t attached to nor inside your home. A wooden outdoor sauna can use either electricity or wood, depending on what your location requires. Infrared or wood are the most popular choices for heaters, especially in barrel saunas.

The global Outdoor Sauna Rooms market size was estimated at USD 98 million in 2023 and is projected to reach USD 161.40 million by 2032, exhibiting a CAGR of 5.70% during the forecast period.
