Report Overview

Indoor walk-in coolers can come with or without a floor. If possible, the installation space should have a pre-poured concrete pad for the best base and to keep the cold air inside the unit. However, not all sites can have a concrete floor indoors, so there are walk-in coolers with fabricated flooring panels for durability and solid base. Sizes range from small 4 foot by 6 foot units to large rectangular units with several hundred cubic feet of storage space. Height of the indoor walk-in cooler unit will also be a major factor, especially if the unit is designed to be installed in an interior space with ceilings that might limit options. A main consideration when purchasing a walk-in refrigerator is the size of the unit and the available space for installation. Some walk-in cooler models are designed for indoor spaces and others are meant for outdoor installation. If you do not have enough interior space to install a walk-in box, consider an outdoor walk in cooler refrigeration unit. Outdoor walk-in coolers allow for more storage space with a larger unit and do not have the same concerns for clearance around the walk-in unit.

The global Outdoor Walk-in Refrigerator market size was estimated at USD 2966 million in 2023 and is projected to reach USD 4926.54 million by 2032, exhibiting a CAGR of 5.80% during the forecast period.
