## Abstracts

An Outsourced SOC Service is a partnership model in which enterprises outsource core security operations functions, such as network security monitoring, threat detection, and incident analysis and response, to a third-party professional service provider. Through its centralized security operations platform, advanced security analysis tools, and 24/7 expert teams, this service provider continuously monitors the client's IT infrastructure, proactively searches for potential threats, analyzes security alerts, verifies security incidents, and rapidly responds and handles them according to predefined processes. The service provider also provides detailed audit reports and compliance support. Its core value lies in enabling enterprises to gain enterprise-grade, continuous cybersecurity threat response capabilities without the need to build their own costly and technically complex internal SOC teams. This effectively reduces security risks, meets compliance requirements, and allows internal resources to focus on core business development. Essentially, this is a risk management strategy that transforms security capabilities into subscription-based services.

The global Outsourced SOC Service market size was estimated at USD 1821.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
