Abstracts

Outsourcing drug discovery refers to the practice by pharmaceutical and biotechnology companies of contracting external organizations, such as contract research organizations (CROs), academic institutions, or specialized service providers, to conduct specific stages of the drug development pipeline—including target identification, hit discovery, lead optimization, preclinical testing, and early clinical trials—rather than performing these functions entirely in-house. This approach allows sponsor companies to leverage specialized expertise, access advanced technologies, reduce fixed operational costs, accelerate timelines, and manage risks more effectively, particularly for complex or resource-intensive research activities. The market encompasses a wide range of services, from high-throughput screening and medicinal chemistry to bioinformatics and toxicology studies, and is characterized by collaborations that may be structured as fee-for-service arrangements, strategic partnerships, or full-service integrated deals.

The global Outsourcing Drug Discovery market size was estimated at USD 4860.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
