Abstracts

To carry out high-throughput screening experiments, facilities often employ automated instruments and liquid handlers in order to test many samples quickly and efficiently. High-throughput screening (HTS) services offer researchers easy access to the experience, expertise, and instrumentation needed to conduct a variety of assays to advance processes in drug discovery and development. HTS applications include enzyme activity assays, molecular binding assays, protein-protein interactions, gene expression screening, compound library screening, cell-based assays, and GPCR assays. HTS-based services often can be tailored to customized requests and the unique requirements of the project. Service providers can also provide technical and scientific advice from the early stages of the project to completion and data analysis. This report counts Outsourcing High Throughput Screening Services, which means that enterprises or research institutions outsource HTS projects to professional service providers. The market drivers for Outsourcing High Throughput Screening Services primarily stem from the rapid growth in drug development demand, cost control needs, and technological advancements. With the rapid development of the global pharmaceutical industry, particularly the rise of innovative drugs and personalized medicine, high-throughput screening (HTS), as a critical step in drug discovery, enables the rapid screening of large compound libraries, accelerating the identification and optimization of drug candidates. Pharmaceutical companies and biotech firms have significantly increased their demand for outsourced HTS services to reduce internal R&D costs and improve efficiency. Additionally, the emergence of small and medium-sized biotech companies and startups has further driven market growth, as these enterprises often lack sufficient funding and technical resources to establish their own HTS platforms, making them more reliant on professional service providers. Technological advancements, especially the application of automated instruments,

robotics, and artificial intelligence, have further enhanced the efficiency and accuracy of HTS, making outsourcing services more attractive. Market trends are reflected in the diversification of detection needs, data-driven R&D, customized services, and the expansion of applications in cell and gene therapy. HTS services are no longer limited to traditional compound screening but have expanded to broader applications such as gene expression analysis, protein interaction studies, and cell phenotype screening. The integration of big data and artificial intelligence enables HTS service providers to help clients extract valuable information from massive screening datasets, accelerating the drug discovery process. At the same time, as drug development projects become more complex and personalized, customized HTS services are becoming mainstream. Furthermore, the rapid development of cell and gene therapy has created new opportunities for HTS services, with cell-based screening and gene-editing technologies emerging as important directions. These trends collectively drive innovation and expansion in the HTS services market, laying a solid foundation for its future growth.

The global Outsourcing High Throughput Screening Services market size was estimated at USD 309.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.10% during the forecast period.
