Abstracts

Over The Horizon Radar (OTHR) refers to a class of long-range radar systems that operate by bouncing high-frequency radio signals off the ionosphere, enabling the detection of targets at distances well beyond the line-of-sight limitations of conventional radar—typically from 800 to 3,500 kilometers. By utilizing skywave or surface-wave propagation modes, OTHR can monitor vast maritime and airspace domains, making it particularly valuable for strategic surveillance, early warning, and maritime domain awareness in both military and civilian applications. These systems are characterized by their ability to cover expansive geographic areas with relatively few installations, though they are subject to environmental influences such as ionospheric conditions and require sophisticated signal processing to mitigate clutter and interference.

The global Over The Horizon Radar market size was estimated at USD 185.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
