Abstracts

Overhead covered conductors are specialized electrical distribution and transmission lines featuring an insulating layer or covering, typically made of materials such as cross-linked polyethylene (XLPE) or high-density polyethylene (HDPE), applied over a bare aluminum or aluminum alloy conductor; unlike traditional bare overhead conductors, these systems are designed to mitigate risks associated with accidental contact, reduce fault occurrences from environmental factors like vegetation or wildlife, enhance safety in densely populated or sensitive areas, and improve reliability by minimizing short circuits caused by external objects or adverse weather conditions, making them particularly suitable for urban networks, forested regions, and areas prone to high winds or icing.

The global Overhead Covered Conductor market size was estimated at USD 4150.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
