Abstracts

An overheight container spreader is a type of lifting equipment specifically designed to handle overheight containers. Standard container spreaders can usually only accommodate standard height containers (usually 8 feet 6 inches), while overheight spreaders are able to adjust their height to accommodate overheight containers (usually over 9 feet 6 inches). This type of spreader enables it to effectively lift and handle cargo that is taller than regular containers by increasing the spreader's height or adopting an adjustable structure. Overheight spreaders are usually equipped with adjustable beams, hooks and locking devices to ensure the safety and stability of overheight containers during lifting, transportation and unloading.
