Report Overview

Artificial insemination (AI) is one of the most important techniques that improve the genetics of livestock animals. After cattle and swine, ovine & caprine production units are rapidly adopting artificial insemination procedures to reduce the reliance on bought-in male sheep and prevent the potency of disease transmission. The success of AI procedures in ovine & caprine relies on the ability to efficiently collect & cryopreserve/freeze seminal fluid from quality male animals, the appropriate procedure & timing of insemination in ewe and doe (female animals), and the seasonality of animal production.

The global Ovine and Caprine Artificial Insemination market size was estimated at USD 1060 million in 2023 and is projected to reach USD 1836.98 million by 2032, exhibiting a CAGR of 6.30% during the forecast period.
