Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Oxamide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Oxamide, with a molecular formula of $(CONH_2)_2$, is an organic compound that is a very stable colorless crystal or powder at room temperature. It is soluble in ethanol, slightly soluble in water, and insoluble in ether. It is a diamide derivative of oxalic acid, and cyanide is the anhydride of oxalyl diamide. In recent years, with the continued growth in demand for high-performance plastics, electronic materials and environmentally friendly additives, the oxalamide market has gained stable development momentum. Especially in the fertilizer and chemical industries, oxalamide has gradually replaced some traditional additives with its excellent thermal stability and low toxicity, becoming an ideal choice for complying with environmental regulations. In addition, process improvements and optimization of synthetic routes have also continuously improved product purity and production efficiency, helping to expand the scope of application and reduce costs. However, the oxalamide market still faces some challenges, such as cost instability caused by fluctuations in upstream raw material prices and the high threshold of some synthetic technologies that limit the entry capabilities of small producers. In addition, there are other substitutes with similar performance on the market that may be competitive in terms of price or compliance. At the same time, as a specialty chemical, the production and application of oxalamide must comply with more stringent environmental protection and safety approval procedures, which also brings certain resistance to industrial expansion.

The global Oxamide market size was estimated at USD 102.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the

forecast period.
