Abstracts

Oxidative stability testers are analytical instruments designed to measure the resistance of oils, fats, biofuels, and other organic materials to oxidation by simulating accelerated aging conditions through controlled exposure to heat and oxygen, typically following standardized methods such as Rancimat, AOCS Cd 12b-92, or ASTM D7545. These devices automatically determine the induction period—the time until rapid oxidation begins—by detecting volatile acids or changes in conductivity, providing critical data for quality control, shelf-life prediction, and compliance with industry regulations in sectors like food processing, biofuels, lubricants, and cosmetics.

The global Oxidative Stability Testers market size was estimated at USD 75.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
