Report Overview

Oxidative stress is initiated by the presence of a reactive oxygen species (ROS) which the cell fails to counterbalance and then it damages the biomolecules such as DNA, RNA, lipids and proteins. Oxidative stress has been associated with the aging process as well as various other disease states. It is an ongoing process between highly reactive radicals and the body system designed for mitigating their effects. Few diseases occur from a failure to counter these effects. Oxidative stress causes many pathophysiological disorders in the body and some of these include neurodegenerative diseases such as Alzheimer's disease and Parkinson's disease, cancers, fragile X syndrome, chronic fatigue syndrome, atherosclerosis, heart and blood vessel disorders, cardiovascular disease, inflammatory diseases and others. Oxidative stress assay is a method for detecting and screening markers of oxidative stress in cells. It is a great tool for analyzing and evaluating the capacity to counter the oxidative stress as it provides relevant biological information.

The global Oxidative Stress Assay market size was estimated at USD 714.10 million in 2023 and is projected to reach USD 1415.64 million by 2032, exhibiting a CAGR of 7.90% during the forecast period.
