Abstracts

An oximeter for home monitoring is a portable, non-invasive medical device designed for consumer use that measures and displays blood oxygen saturation levels (SpO2) and pulse rate, typically by clipping onto a fingertip and utilizing photoplethysmography (PPG) technology to analyze light absorption through the skin. These devices are distinct from clinical-grade oximeters used in healthcare settings, as they prioritize ease of use, affordability, and accessibility for personal health tracking rather than medical diagnosis, though many modern home models now offer features like Bluetooth connectivity, mobile app integration, and trend tracking to support long-term health observation.
