Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Oxonitridosilicate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Oxonitridosilicates reached approximately 1350 tons, with an average global market price of around USD 220 per kg. Oxonitridosilicates are a class of inorganic compounds that belong to the family of mixed anion materials, composed of silicon, oxygen, and nitrogen, often with additional metal cations such as alkaline earth or rare-earth elements. Structurally, they combine features of silicates and nitrides, in which nitrogen atoms partially replace oxygen atoms in the silicate framework, resulting in highly stable, rigid, and interconnected tetrahedral networks. This unique chemistry imparts oxonitridosilicates with exceptional thermal, chemical, and mechanical stability, as well as tunable optical properties, making them valuable for applications in phosphors for light-emitting diodes (LEDs), high-performance ceramics, luminescent materials, and structural components under extreme conditions.

The global Oxonitridosilicate market size was estimated at USD 298.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Oxonitridosilicate market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
