Abstracts

An oxygen diaphragm compressor is a specialized positive displacement compressor designed specifically for handling pure oxygen or oxygen-enriched gases, utilizing a reciprocating diaphragm mechanism that creates a hermetic seal between the compressed gas and the lubricated crankcase to eliminate contamination risks and prevent ignition hazards associated with oxygen's high reactivity. These compressors are engineered with non-sparking, oxygen-compatible materials such as stainless steel, monel, or specialized polymers for wetted parts, and they operate without oil in the compression chamber to maintain gas purity and meet strict industry standards for medical, aerospace, industrial gas production, and laboratory applications where clean, high-pressure oxygen delivery is critical.

The global Oxygen Diaphragm Compressor market size was estimated at USD 720.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
