Abstracts

Oxygen free copper anodes are high-purity copper products, specifically manufactured with minimal oxygen content (typically less than 10 parts per million), used primarily in electroplating and electroforming applications where superior electrical conductivity, ductility, and corrosion resistance are essential; these anodes are produced through carefully controlled melting and casting processes?often under inert or reducing atmospheres?to prevent oxide formation, ensuring a uniform, defect-free surface that dissolves consistently during electrolysis and minimizes impurities in plated deposits.
