Report Overview

Oxygen-free copper busbar, also known as OFC busbar, is a high-grade copper conductor that is manufactured with extremely low oxygen content. It is produced through a specialized oxygen removal process, resulting in a copper material with a purity level of 99.99% or higher. The absence of oxygen in the OFC busbar minimizes the formation of oxides and impurities, ensuring better electrical conductivity and corrosion resistance. These busbars are commonly used in electrical power distribution systems, switchgear, and high-performance applications where low electrical resistance and superior electrical performance are critical for efficient power transmission.
