Abstracts

Oxygen-Free High Conductivity Copper is produced by the direct conversion of selected refined cathodes under carefully controlled conditions to prevent any contamination of the pure oxygen-free metal during processing. With so small a content of extraneous elements, the inherent properties of elemental copper are brought forth to a high degree. Characteristics are high ductility, high electrical and thermal conductivity, high impact strength, good creep resistance, ease of welding, and low volatility under high vacuum. In this report, we mainly study the Oxygen-Free High Conductivity Copper market segment by shape, which covers Oxygen-Free Copper Rods, Oxygen-Free Copper Strips and other shapes. The global Oxygen-Free High Conductivity Copper market has been experiencing growth and is projected to continue expanding over the coming years. Oxygen-free copper, known for its high conductivity and lack of oxygen content, is used in various industries such as electronics, telecommunications, electrical engineering, and manufacturing.

1. Increasing Demand in Electronics and Telecommunications Electronics and electrical industries are the largest consumers of oxygen-free copper, as it is essential in producing high-quality wiring, connectors, and circuit boards that require high electrical conductivity. With the growing demand for consumer electronics (smartphones, laptops, tablets), 5G infrastructure, and electric vehicles (EVs), oxygen-free copper is seeing increased demand. The rise of 5G networks and the IoT (Internet of Things) has amplified the need for high-conductivity copper in telecommunication systems, leading to higher adoption of oxygen-free copper in cables and connectors.

2. Growing Electric Vehicle (EV) Production The electric vehicle market is a significant driver of oxygen-free copper demand. EVs use copper for various components such as motors, batteries, wiring, and charging systems. As the shift to electric vehicles continues globally, the demand for high-conductivity copper materials like oxygen-free copper is expected to rise. Battery systems, in particular, require copper due to its high conductivity, making oxygen-free copper suitable for use

in battery packs and power transmission systems.

3. Expansion of Renewable Energy
The expansion of renewable energy sources like solar power and wind energy has driven demand for oxygen-free copper, particularly in the manufacturing of solar panel wiring and wind turbine components. Oxygen-free copper's high conductivity ensures optimal performance in energy transmission. With global energy transitions aiming for net-zero emissions by 2050, demand for efficient electrical components, including those made from oxygen-free copper, is expected to continue growing.

4. Innovation in Manufacturing and Materials
Advances in copper production technologies and new manufacturing processes have made oxygen-free copper more readily available and cost-competitive. For example, new techniques to reduce oxygen levels during copper production, such as casting and drawing processes, help to produce more oxygen-free copper in bulk at a lower cost. The market is also witnessing increased development in copper alloys that combine oxygen-free copper with other metals (like silver and nickel) to improve performance, particularly in the fields of electronics and high-tech industries.

5. Regional Trends
Asia-Pacific is the largest market for oxygen-free copper, driven by the region's rapid industrialization, technological advancements, and massive consumer electronics production in countries like China, Japan, and South Korea. The region's strong demand for copper-based products in electronics, energy, and automotive sectors is pushing growth. North America and Europe are also significant markets for oxygen-free copper, especially with the growing emphasis on electric vehicles and renewable energy. North American demand is being driven by EV and grid infrastructure developments, while Europe is focusing on sustainability and energy efficiency. As for the consumption, Asia Pacific is the largest consumer, who owned 61.59% share in global consumption market. The global key Oxygen-Free High Conductivity Copper manufacturers include Metrod Holdings Berhad, Aurubis, Wieland-Werke, SAM Dong KGHM Polska Miedz, Mitsubishi Materials, Sh Copper Products, KME Germany, Aviva Metals, Citizen Metalloys, Ningbo Jintian Copper, Jiangsu Xinhai and Wangbao Group, etc. The industry's market concentration is relatively low. The top five players in the world accounted for above 20% of market.

The global Oxygen-Free High Conductivity Copper market size was estimated at USD 14100.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 0.40% during the forecast period.
