Abstracts

Oxygen indicating tablets are chemical-based, single-use sensors designed for the qualitative or semi-quantitative detection of oxygen presence or concentration in a given environment, typically used in applications where oxygen levels must be monitored to prevent spoilage, ensure safety, or verify packaging integrity. These tablets react with oxygen through a colorimetric change?often turning from colorless to pink or blue?providing a visual indication of oxygen exposure. They are widely employed in the food and beverage industry, pharmaceuticals, and medical sectors, particularly in modified atmosphere packaging (MAP), where maintaining low oxygen levels is critical to extending product shelf life and ensuring quality. The tablets offer a cost-effective, simple, and rapid alternative to electronic oxygen sensors, especially useful in settings requiring disposable, portable, or non-technical solutions.

The global Oxygen Indicating Tablet market size was estimated at USD 32.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
