Abstracts

An oxygen indicator label is a specialized type of chemical sensor label that changes color or appearance in response to the presence or concentration of oxygen within a sealed environment, such as a package, container, or modified atmosphere packaging (MAP) system. These labels function by employing oxygen-sensitive dyes or reagents, often based on redox chemistry, which undergo a visible and irreversible or reversible transformation?such as shifting from pink to blue or from colorless to colored?when exposed to oxygen levels above a predetermined threshold. Primarily used in the food and pharmaceutical industries, as well as in medical device packaging, oxygen indicator labels serve as a critical quality control and safety tool to verify package integrity, confirm the effectiveness of oxygen scavengers, ensure proper modified atmosphere conditions, and detect leaks that could lead to product spoilage, oxidation, or compromised sterility.

The global Oxygen Indicator Label market size was estimated at USD 78.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
