Report Overview

Oxygen (O₂) is a colorless, odorless, tasteless gas that makes up approximately 21% of the Earth's atmosphere by volume. It is essential for respiration in most life forms, as well as for combustion and various chemical reactions. Oxygen exists as a diatomic molecule (O₂) under normal conditions, but it can also be found in other forms such as ozone (O₃) and in compounds with other elements, such as water (H₂O) and oxides. It is one of the most abundant and reactive elements in the universe, widely used in industrial, medical, and environmental applications. In industrial settings, oxygen is primarily produced through fractional distillation of liquefied air or by the electrolysis of water, and its purity and concentration are critical for different sectors, such as healthcare, metal production, and environmental monitoring.
