Report Overview

The Oxygen Plasma Cutter is a cutting device that uses oxygen plasma to heat metal materials and blows them away with high-speed airflow. It uses high-frequency electric arc to decompose oxygen molecules into oxygen ions and free electrons, and then acts on metal materials through high-temperature and high-speed oxygen plasma jet and chemical reaction to cut them into desired shapes. Compared with the traditional oxy-acetylene welding, the oxygen plasma cutting machine has faster cutting speed, higher precision, smaller heat-affected zone, and no open flame, which is safer.
