Abstracts

Oxygen safe lubricants, also known as oxygen-compatible or oxygen-service lubricants, are specialized industrial lubricants formulated to minimize the risk of ignition or combustion when used in systems handling pure oxygen or oxygen-enriched environments, as they are designed to resist oxidation, have high auto-ignition temperatures, and are free of volatile or reactive components that could trigger fires or explosions in such high-risk applications. These lubricants are crucial in industries like aerospace, medical gas systems, scuba diving equipment, and industrial gas handling, where even minor contaminants or incompatible materials could lead to catastrophic failures due to oxygen's role as a powerful oxidizer.

The global Oxygen Safe Lubricants market size was estimated at USD 180.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
